

Partisanship and local fiscal policy

Evidence from Brazilian cities

Raphael Gouvêa* and Daniele Girardi**

Oct 2020

* Institute for Applied Economic Research (Brazil), University of Massachusetts Amherst (USA).

** University of Massachusetts Amherst (USA).

Do parties matter for local fiscal policy?

- Brazilian cities in 2004-2016;
- RD design to causally identify partisan effects;
- Effect of electing a left-wing mayor on a city's fiscal policy;
- Mechanisms determining convergence/divergence.

Main results:

- Brazilian left-wing mayors do not increase the size of the city government.
- But they modestly increase (≈ 0.6 pp) the share of social spending.
- Stronger social spending effects for lame-duck mayors (≈ 1.3 pp) and in cities experiencing oil windfalls (≈ 2.2 pp).

Main results:

- Brazilian left-wing mayors do not increase the size of the city government.
- But they modestly increase (≈ 0.6 pp) the share of social spending.
- Stronger social spending effects for lame-duck mayors (≈ 1.3 pp) and in cities experiencing oil windfalls (≈ 2.2 pp).
- Mechanisms limiting divergence:
 - Institutional/budget constraints ✓
 - Re-election concerns ✓
 - Fiscal ('Tiebout ') competition ✗
 - Ideologically mixed mayoral coalitions ✗

Institutional context

- 5,570 cities in Brazil.
- Main responsibilities:
 - childcare & primary education;
 - basic health services;
 - city infrastructures & urban planning;

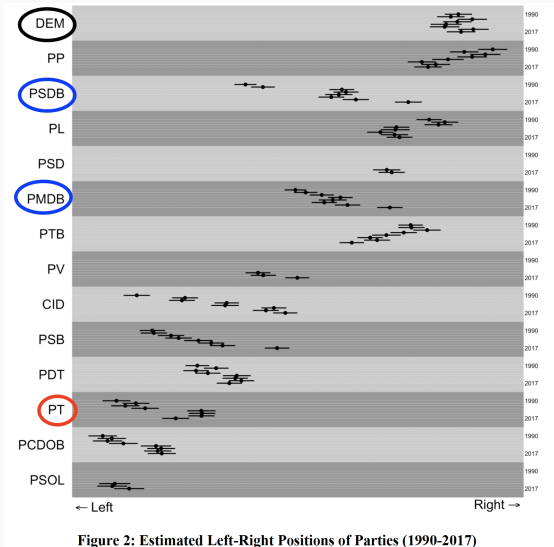

Institutional context

- 5,570 cities in Brazil.
- Main responsibilities:
 - childcare & primary education;
 - basic health services;
 - city infrastructures & urban planning;
- Little self-financing capacity.
 - Transfers = 58% of municipal revenues in 2016.
- Mayor *directly* elected every four years.
 - Bigger cities (> 200,000): majority rule with runoff;
 - Others: plurality rule.
- Executive branch (mayor) has control over the city budget
 - legislature's role more limited.

Political parties and left-right divide in Brazil

Social and political cleavages

Figure 1. The Rise of Class Cleavages in Brazil, 1989-2018

Source: Gethin & Morgan (2018)

Electoral Data:

- Electoral results (*Tribunal Superior Electoral*).
→ Municipal elections of 2004, 2008 and 2012.
- Party ideology (Zucco & Power, forthcoming).

Public Finance:

- Municipal annual revenues and expenditures (*FINBRA-STN*).
- Oil royalties (*STN*).

City characteristics:

- Demographic variables (2000 and 2010 Census).
- Municipal GDP (*IBGE*).
- Bolsa Familia cash transfers (*Ministerio da Cidadania*).

Sample:

- $\approx 9,000$ 'usable' city-election observations

Regression-discontinuity design (RDD):

- Intuitively: estimate a causal effect by comparing close winners.

Regression-discontinuity design (RDD):

- Intuitively: estimate a causal effect by comparing close winners.
- RD specification:

$$y_{it} = \beta \mathbb{1}\{ml_{it} > 0\} + f(ml_{it}) + \alpha_i + \tau_t + \varepsilon_{it}$$

y_{it} = public finance outcome over the mayoral term;

ml_{it} = left candidate margin;

α_i = city fixed effects;

τ_t = year fixed effects.

Research design

Difference in city characteristics between left and non-left mayors, by left margin of victory

	All	+/- 40	+/- 10	+/- 5	baseline RD
log(Population) $\times 100$	27.90 (2.60)	3.57 (2.72)	3.45 (3.69)	-0.36 (4.90)	-0.04 (0.47)

Effects by mayoral term and extended time period

Effect of a left-wing mayor on the social spending share, by mayoral term

Mechanisms: why partisan effects are so limited?

Re-election concerns?

- Consistent with models of political competition with reputation-building (Enelow & Munger 1993; Besley & Case 1995);
- **Test:** lame-duck mayors.

Mechanisms: why partisan effects are so limited?

Re-election concerns?

- Consistent with models of political competition with reputation-building (Enelow & Munger 1993; Besley & Case 1995);
- **Test:** lame-duck mayors.

Effect of a left-wing mayor

	tot spending (% of GDP)	social exp (% of tot spending)	social exp per capita
Baseline (all cities-elections)	0.01 (0.24)	0.64 (0.21)	1.16 (0.61)
Lame ducks mayors (N = 2,395 / 1,227)	-1.05 (1.18)	1.27 (0.40)	3.34 (1.36)

Mechanisms: why partisan effects are so limited?

Fiscal ('Tiebout'-type) competition within local areas?

- Ferreira & Gyourko (2009, QJE): Tiebout competition explains policy convergence between D and R mayors in US cities;
- **Test:** Cities facing lower Tiebout-competition.
 - commuting-zone level Herfindahl index as a proxy for competition intensity.

Mechanisms: why partisan effects are so limited?

Fiscal ('Tiebout'-type) competition within local areas?

- Ferreira & Gyourko (2009, QJE): Tiebout competition explains policy convergence between D and R mayors in US cities;
- **Test:** Cities facing lower Tiebout-competition.
 - commuting-zone level Herfindahl index as a proxy for competition intensity.

Effect of a left-wing mayor

	tot spending (% of GDP)	social exp (% of tot spending)	social exp per capita
Baseline (all cities-elections)	0.01 (0.24)	0.64 (0.21)	1.16 (0.61)
Tiebout < median (N=4,158/2,367)	-0.36 (0.43)	0.71 (0.30)	0.25 (0.86)
Tiebout < 25th pct (N=2,081/1,347)	-1.10 (0.89)	0.20 (0.41)	-0.74 (1.37)

Mechanisms: why partisan effects are so limited?

Institutional constraints?

- Public finance regulations, limited self-financing capacity & 'hardwired' expenditures;
- **Test:** Cities experiencing oil windfalls.
 - large increases in oil royalties during the mayoral term;

Mechanisms: why partisan effects are so limited?

Institutional constraints?

- Public finance regulations, limited self-financing capacity & 'hardwired' expenditures;
- **Test:** Cities experiencing oil windfalls.
 - large increases in oil royalties during the mayoral term;

Effect of a left-wing mayor

	tot spending (% of GDP)	social exp (% of tot spending)	social exp per capita
Baseline (all cities-elections)	0.01 (0.24)	0.64 (0.21)	1.16 (0.61)
Oil windfalls (N = 919/451)	-0.13 (0.47)	2.19 (0.87)	6.48 (2.40)

Mechanisms: why partisan effects are so limited?

Ideologically ambiguous coalitions?

- Pre-electoral coalition-building might lead to internally heterogeneous coalitions
- **Test:** Identify more 'polarized' elections.
 - Index of coalition ideology based on Zucco & Power.

Ideology Score Graph

Mechanisms: why partisan effects are so limited?

Baseline (all cities-elections)	0.01 (0.24)	0.64 (0.21)	1.16 (0.61)
Ideology distance > median (N=3,105/1,660)	-0.02 (0.25)	0.91 (0.39)	1.92 (0.93)
Ideology distance > 75th pct (N=1,545/814)	0.43 (0.40)	0.78 (0.49)	0.77 (1.36)

Social expenditure effects by year in office

Robustness tests:

- Differenced outcomes;
- Excluding first year of the term;
- Bandwidth selection criteria;
- Estimates by city size;
- Falsification tests using placebo thresholds;

Falsification test

Effect on social expenditures:

Distribution of t-stats from 200 randomly drawn placebo thresholds

Vertical red dotted line = t-stat from the true threshold

Some takeaways

- Brazilian parties attempt to shape allocation of municipal resources to favor their electoral base...
- ...but are severely constrained by institutional constraints and re-election concerns.
- Strong parallel with national political dynamics
 - PT party of pro-poor welfare policies
- Relevant for debate on political cleavages in newly democratized developing countries.
